ABSTRACT

An electrical apparatus operation state control system controls an operation state of an electrical apparatus operated by an operation unit which is operated by a user for switching an operation state. The system includes a communication control unit which is disposed between the electrical apparatus and an operating power supply for the electrical apparatus and an operation state switching unit which is disposed at the electrical apparatus side for switching an operation state of the electrical apparatus independent of operation in the operation unit. The electrical apparatus is arranged so that an operation state thereof in power activation is changeable into a plurality of stages and the operation state switching unit is rendered operable via the communication control unit when a remote operated terminal executing an over-the-horizon communication with the communication control unit.
